

Towards Simple Code:

A Workshop on the Value of Simplicity in Software

Giovanni Asproni, Kevlin Henney, Peter Sommerlad

simple code

Giovanni Kevlin Peter

agenda

- begin - 11:00
- laws of simplicity - 11:05
- split up and brainstorm in groups - 11:25
- collect results ~ 12:00
- end - 12:31

laws of simplicity

John Maeda

1. reduce

6. context

2. organize

7. emotion

3. time

8. trust

4. learn

9. failure

5. differences

10. the one

reduce

The simplest way to achieve simplicity is
through thoughtful reduction.

SHE: shrink, hide, embody

organize

Organization makes a system of many
appear fewer.

time

Savings in time feel like simplicity.

learn

Knowledge makes everything simpler.

differences

Simplicity and complexity need each other.

context

What lies in the periphery of simplicity is
definitely not peripheral.

emotions

More emotions are better than less.

trust

In simplicity we trust.

failure

Some things can never be made simple.

the one

Simplicity is about subtracting the obvious,
and adding the meaningful.

key l : away

More appears like less
by simply moving it far, far away.

key 2: open

Openness simplifies complexity.

key 3: power

Use less, gain more.

brainstorm guide

- "We believe that X"
- "We believe that X is Y, because of Z"
- "X is defined as A, B and C"
- "We favour X over Y"

results
